Fire Activity and Weather Summary

The 1995–1996 winter began with a period of wetting rains throughout most of the Pacific Northwest and Northern Rockies. By and large, snow covered most fuels after the rain had restored moisture lost during the summer drying period. Precipitation averages for all Northern tier States ranged from 145 to187 percent of normal. California and Great Basin States ranged from 67 to 86 percent. Only Arizona and New Mexico were dry, showing 19 and 24 percent of normal precipitation, respectively. Snowpack was near normal or above in Idaho, Montana, Wyoming, and Colorado. Less than 50 percent of normal snowpack was noted in Oregon, California, Nevada, Arizona, and New Mexico. Little significant fire activity was noted. Southern California and Texas experienced one large fire each.

Trends initiated in December continued into January as precipitation totals continued to improve throughout the West. Washington, Oregon, Idaho, Montana, and Wyoming all exceeded 144 percent precipitation with California, Nevada, Utah, and Colorado in the 70 to 80 percent range. Only Arizona and New Mexico remained seriously deficient with totals less than 25 percent. Snowpack continued to improve with a series of storms moving across the Great Basin. The East Coast and Midwest also experienced a severe winter with numerous storms and below zero temperatures common. The only area showing drought conditions was extreme western Arizona along the Colorado River. Fire activity was noted in Oklahoma and Texas as the result of wind events. The Wichita Mountains National Wildlife Refuge experienced the Westend Fire (9,000 acres). Alaska was generally dry and cold; snowpack and precipitation were 50 percent below normal.

February brought alternating warm and cold periods to much of the United States. The Northwest, Northern Rockies, and northern California experienced a series of winter storms followed by warm rains. This resulted in significant flooding in Washington, Oregon, Northern Idaho, and Montana. Most of the West continued to reflect above normal snowpacks, with the exception of Arizona, New Mexico, southern Utah, and southwest Colorado. Eastern States continued to experience a cold winter with record snowfalls. Drought conditions were noted in the south central Plains States.

Kansas, Oklahoma, and Texas experienced record fire activity with hundreds of thousands of acres burned almost entirely on lands protected by State and local authorities. The only large fire (1,000 acres or more) on lands protected by the Forest Service was the Upland Island Fire, which burned nearly 4,000 acres. Incident Management Teams were mobilized to the Ada Complex (30,000 + acres) in Oklahoma and the Northeast Oklahoma Complex. New Mexico also experienced a Type II Incident, the Elk Complex (3,850 acres). All of these fires resulted from dry conditions and wind events. Significant mobilization occurred, including early activation of eight airtankers, a caterer, lead planes, engines, a Type I crew, and radio equipment. Late in the month, fire activity began to increase in southern Florida.

Fire Activity and Weather Summary

Fire activity continued in March in Texas, Oklahoma, and New Mexico. Weather conditions prevailed—cold and snowy across the Central and Eastern United States and warm and dry in the Southwest. Drought conditions continued to worsen in Texas, New Mexico, Arizona, and southern California. A series of storms with high winds moved through Texas, causing thousands of acres of mainly State and private lands to burn. An Incident Management Team was mobilized to the Globe/Gap Mountain Complex (254 acres) in North Carolina. Resource mobilization continued through March—mainly to Texas to support pre-positioning requirements.

The Canyon Fire in Colorado was the first large national forest fire in April—it burned 9,523 acres on the Pike-San Isabel National Forest. In Texas, fire activity continued as high temperatures and windy conditions prevailed. A major snowstorm moved into Texas on April 5th and dumped record amounts of snow in the north and central parts of the State. Fire activity began to increase in the Southwest by mid-month. Hot, dry, and windy conditions persisted during the month in the Southwest, and drought conditions continued to get worse. The Kudzu Fire on the National Forests in Mississippi burned 1,130 acres in mid-April. By the end of the month, several Type I and II incidents were occurring. Nearly all available airtankers and Type I crews were mobilized to the Southwest Area. Southern Colorado and southern California were also picking up activity with Type II incidents. The Grand Fire on the Los Padres National Forest burned 10,925 acres late in April, and the National Forests in Mississippi again dealt with a large fire that month—the Junior Fire burned 1,092 acres.

The entire Southwest Area and most of southern California were in severe or extreme drought by May. Record temperatures persisted throughout the Southwestern States and into Colorado and Utah. Fire activity was significant in the Southwestern States, with severe fire behavior exhibited. Pro-active fire prevention programs and additional resources brought on by severity funding helped many areas experience successes in initial attacks. Two to three times the number of units normally responding was often common. Recurring fire activity was noted along the southern California border with Mexico where undocumented international travelers were often at risk when fires occurred. Wind-driven fires increased mobilization into the Rocky Mountains and Great Basin. Alaska also experienced significant fire activity. Fire activity continued in Forida in the Southern Area and in Michigan in the Eastern Area. The National Interagency Command Center (NICC) in Boise, Idaho, received reports on 9,729 fires in May; they burned 307,249 acres.

Three Type I Incident Management Teams were assigned to fires in Arizona, New Mexico, and Colorado in May. Six Type II Incident Management Teams were assigned to fires in Arizona, New Mexico, Colorado, and Alaska. Large fires on lands protected by the Forest Service ranged in size from the Pony Fire on the San Bernardino National Forest (1,067 acres, starting on May 13) to the Buffalo Creek Fire on the Pike-San Isabel National Forest (11,875 acres, which began on May 18).

Fire Activity and Weather Summary

June continued with record temperatures and little rainfall in southern California, Arizona, New Mexico, southern Colorado, and southern Utah. Some locations in the Southwest received as little as ½-inch of rainfall after October 1. Windy periods were also common throughout much of the West, and Alaska continued with significant activity. A large wildland-urban interface fire—Miller's Reach—occurred near Anchorage; it burned more than 36,000 acres in less than 3 days. During the third week of June, Arizona experienced intense lightning storms that resulted in a number of Incident Management Team mobilizations as well as an Area Command. Arizona national forests experienced five large fires ranging in size from the Cottonwood Fire on the Apache-Sitgreaves National Forest that began on June 23 (1,484-acres) to the Bridger Knoll Fire on the Kaibab National Forest that began on June 21 (35,907 acres).

During this same period, Ontario, Canada, experienced a number of fires, resulting in a request to the United States to mobilize a Type I Incident Management Team and six handcrews to manage the Graham Cluster. National Forests in California experienced a total of eight large fires during June. On the 30th, California experienced an outbreak of significant fire activity in the southern part of the State that required Incident Management Team mobilizations. Competition for resources was not significant because the busy periods for fires did not overlap. There were 12,611 fires reported to the NICC in June that burned 953,564 acres. In addition to the Type I Incident Management Team mobilized to Canada, nine were assigned to fires in California, Arizona, New Mexico, Colorado, Utah, Nevada, and Alaska. Twenty-three Type II Incident Management Teams were assigned to fires in California, Arizona, New Mexico, Colorado, Utah, Nevada, Alaska, and Minnesota in June.

Fire Activity and Weather Summary

During July, the western fire season began its annual progression to the north. Numerous fires occurred in brush and grass fuel types of the Great Basin as fuels dried and cured. These short duration fires continued until July 21, when conditions moderated and the national preparedness level returned to II for one week. By July 28th, all Western Geographic Areas experienced escaped fire situations. A National Park Service All Risk Team was mobilized to help manage the effects of flash flooding on Mescalero tribal lands. A Type I Incident Management Team was mobilized in the Southern Area to manage a Receiving and Distribution Center for the Federal Emergency Management Agency (FEMA) during Hurricane Bertha. There were 9,604 fires reported to the NICC in July that burned 828,407 acres.

Six Type I incident Management Teams were assigned to fires in California, Utah, and Oregon in July. Twenty-six Type II Incident Management Teams were assigned to fires in California, Nevada, Arizona, Colorado, Wyoming, Utah, Idaho, Montana, and Oregon. A total of 20 large fires occurred on Forest Service lands that month. The Flat Creek Fire on the Humboldt National Forest was the largest—it began on July 24 and burned 14,440 acres.

Continued drying of fuels was experienced in August with seasonal precipitation, but higher temperatures were noted throughout the West. Large fire support and vigorous initial attack were the key features of fire management during the first half of the month. By the fourth of August, the East Great Basin had 12 large fires, southern California had 4, northern California had 1, Rocky Mountain had 9, the Northwest had 2, and the Northern Rockies was working on 8 fires. An Area Command was put in place in Utah. This trend continued until August 13, when activity increased significantly and the national preparedness level went to IV, where it remained for 3 days. At that time, there were 39 major fires burning in the West. Preparedness level V was declared on August 16 when 48 major fires existed. On August 19th, training of the Task Force Vanguard, 3rd Brigade, and 4th Infantry Division was conducted at Fort Carson, Colorado. This battalion was deployed to the Fork Fire on the Mendocino National Forest in northern California (beginning on August 11, it burned 83,323 acres) and later moved to the Summit Fire on the Umatilla National Forest in Oregon (37,835 acres burned on this fire that began on August 13).

Resource demand continued to exceed capability. Additional Emergency Firefighting (EFF) crews were trained along with National Guard units. All eight Modular Airborne Firefighting Systems (MAFFS) units were mobilized to Redding and Stockton, California. Three Canadian airtankers were mobilized to the Northwest along with four crews—two from British Columbia and two from Saskatchewan. Fires started by lightning on August 26 resulted in the mobilization of an Area Command, seven Type I Incident Management Teams, and five Type II Incident Management Teams—all within 24 hours. On August 30, the 1st Marine Expeditionary Force, 2nd Battalion, 5th Marine Regiment was trained for deployment to the Tower Fire on the Umatilla National Forest that burned 50,633 acres. There were 8,342 fires reported to NICC in August that burned 2,479,212 acres. By the end of the month, a total of 85,313 fires were reported to the NICC for the year (5-year average—65,341) that burned 5,380,398 acres (5-year average—1,963,864).

Fire Activity and Fire Weather Summary

In August, 90 Incident Management Teams were mobilized to fires, averaging almost three teams a day. Twenty-six Type I and 64 Type II Incident Management teams were assigned to fires throughout the Western United States. National Forests experienced a total of 54 fires that month; the largest was the Highway 58 Fire on the Los Padres National Forest; it burned 106,668 acres.

In early September, the persistent high-pressure ridge that was the key feature of the western summer weather pattern began to shift to the east. This allowed low-pressure troughs to move through the Northwest and Northern Rockies. While these events brought winds, they also followed with an increase of relative humidity, cooler temperatures, and in some areas, precipitation. This allowed significant progress to be achieved on many of the large fires. On Friday, September 6, the national preparedness level returned to level IV. During the week of September 9, both military battalions were released and the national preparedness level returned to III.

On Tuesday, September 17, the national preparedness level dropped to II. A Type I Incident Management Team was mobilized to manage a Receiving and Distribution Center during hurricane Fran in North Carolina. There were 7,280 fires reported to the NICC during September that burned 484,817 acres.

Incident Management Team assignments in September included three Type I Incident Management Teams to Idaho, Montana, and Wyoming. Ten Type II Incident Management Teams were assigned to fires in California, Nevada, Idaho, Montana, Wyoming, Oregon, and Washington. During the month, seven large fires burned on national forests in Idaho, Montana, Wyoming, and Nevada.

Fire Activity and Fire Weather Summary

October began with limited fire activity in the West. High pressure persisted over the Western States, although seasonal temperatures and longer nights proved to keep fires manageable. On October 21, Santa Ana winds developed in California, resulting in moderately large fire activity in southern California. Most activity occurred in State and local protection areas. Numerous structures were lost on these fires.

Two Type I Incident Management Teams were assigned to fires in California during October. Also, during that month, Type II Incident Management Teams were assigned to fires in California, Nevada, Idaho, Wyoming, Montana, and Minnesota. There were only four large fires on national forests; the largest was the Wild Fire on the Los Padres that burned 25,620 acres.

On Saturday, November 2, the NICC closed for the first time since February 10, thus ending the longest period of continual operation in its history.

Large Wildfire Occurrence Report

In 1996, there were 96 Class F and G Wildfires (over 1,000 acres) that burned land totaling 994,229 acres. Acreages listed represent the acres burned for all land ownerships under Forest Service protection. These acres may differ from the activity summary on pages 3-7 because of protection responsibilities.

The United States Department of Agriculture (USDA) prohibits discrimination in its programs on the basis of race, color, national origin, sex, religion, age, disability, political beliefs, and marital or familial status. Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact the USDA Office of Communications at (202) 720-5881 or (202) 720-7808 (TDD).

To file a complaint, write the Secretary of Agriculture, U.S. Department of Agriculture, Washington, D.C. 20250 or call (202) 720-7327 (voice) or (202) 720-1127 (TDD). USDA is an equal employment opportunity employer.
